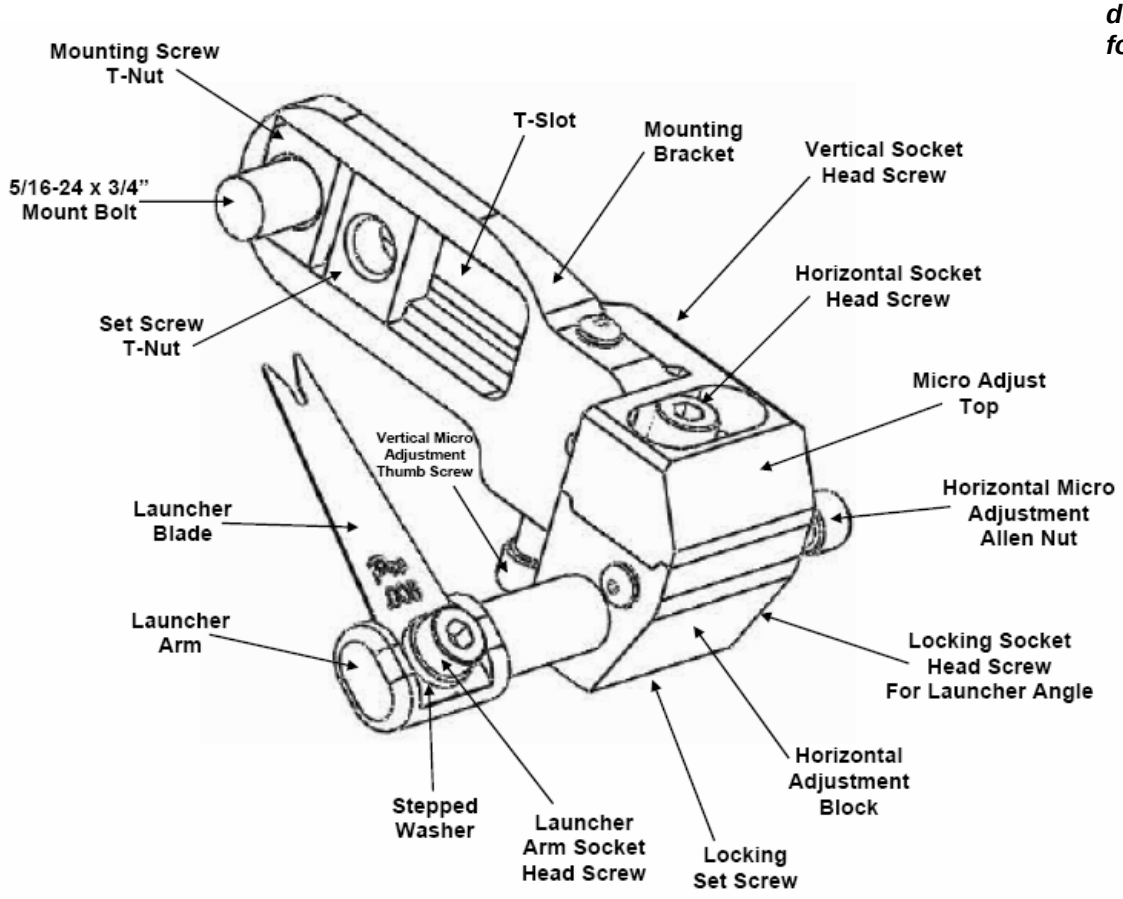
The ***Freak Show*** is a specially designed rest to be set-up so it is an anti-torque target rest. It is also the only rest that has a T-Slot on the mounting bracket for complete adjustability. The T-Nuts are made to mount the rest in any location on your bow that best fits how you want to set-up your ***Freak Show*** rest. Mount the ***Freak Show*** to the side of your bow with the enclosed 5/16-24 x 3/4" mounting bolt placing it through the T-Nut that has no threads. Make sure the rest is at right angles (90 degree) to your bowstring or riser. Now Move your center shot to align your arrow with the center of your bow. This can be done by loosening the horizontal micro adjustment allen nut to move the horizontal adjustment block left or right. There are three screw holes that the horizontal socket head screw can be placed into to allow for more adjustment if necessary.

There are two ways to move the launcher blade. You can use the vertical micro adjustment thumb screw. Simply loosen the vertical socket head screw (located on the side of the mount) and turn the vertical micro adjustment thumb screw. To rotate the launcher arm, loosen the locking set screw (located under the horizontal adjustment block) and the locking socket head screw (located on the side of the horizontal adjustment block). Make sure to tighten the locking set screw and locking socket head screw when you are done with your adjustment.

The ***Freak Show*** has a unique raised hex on the launcher arm that matches up with the launcher blades. This allows you to change blades at any time without losing your center shot adjustment. Simply remove the launcher arm socket head screw and stepped washer and replace the launcher blade making sure that the hex hole is seated correctly before tightening the launcher arm socket head screw.

The ***Freak Show*** launchers are available in a standard configuration for carbon arrows and smaller aluminum shafts, and a wide configuration for the larger carbon or aluminum shafts. They are also available in .008", .010", and .012" thickness for a wide range of tuning possibilities.



Here's a list that will help you to determine which mount you'll need for your bow.

Freak Show Extended Mount

- Mathews-Triumph
- Mathews-Monster
- PSE-Dominator
