

MASTER LOK PLUNGER

NOTE: Designed for use with wrap-around rests

The "Master Lok" plunger has been developed for both the bow-hunter and target archer. It is designed to be durable enough to lock a wrap-around arrow rest to your bow, yet smooth enough for the most discriminating archer.

The "Master Lok" plunger features a stainless steel Teflon lined barrel and a stainless steel stem. It also features replaceable tips and three sizes of tapered springs for a wide range of adjustments.

INSTRUCTIONS

First adjust the center shot of your arrow and tighten the metal hex nut against your bow to secure the plunger. Make all tension adjustments with the spring adjustment screw at the rear of the plunger, or by changing the weight of the spring.

Be sure to loosen the set screw before removing the spring adjustment knob or turning the spring adjustment screw. For additional cushion plunger bow tuning instructions, please contact us.
