

Pro Blade Target Arrow Rest

The Pro Blade target arrow rest has been designed with the help of some of the top tournament compound shooters in the world. This rest has been built to meet their exacting standards for accuracy, durability, and ease of adjustment. Each Pro Blade has been CNC machined to very high tolerances. We believe this is the finest blade-style rest ever produced.

Mount the Pro Blade to the side of your bow with the enclosed 5/16 × 3/4" mounting bolt. Make sure the rest is at right angles (90°) to your bowstring or riser. Now move your center shot to line your arrow with the center of your bow. This can be done by loosening the horizontal micro-adjustment thumb screw to move the block left or right. There are three screw holes that the socket-head screw can be placed into to allow for more adjustment if necessary.

Next, you can move the launcher blade with the vertical micro adjustment thumb screw. Simply loosen the vertical socket head screw and turn the vertical micro adjustment thumb screw. The launcher blade has been preset to the angle most preferred by top shooters.

The Pro Blade has a unique raised hex on the launcher arm that matches up with the launcher blades. This allows you to change blades at any time without losing your center shot adjustment. Simply remove the launcher arm socket head screw and stepped washer and replace the launcher blade making sure that the hex hole is seated correctly before tightening the launcher arm socket head screw.

Pro Blade launchers are available in a standard configuration for carbon arrows and smaller aluminum shafts, and a wide configuration for the larger aluminum or carbon shafts. They are also available in .08", .010", and .012" thickness for a wide range of tuning possibilities.
