gripper V-Bar

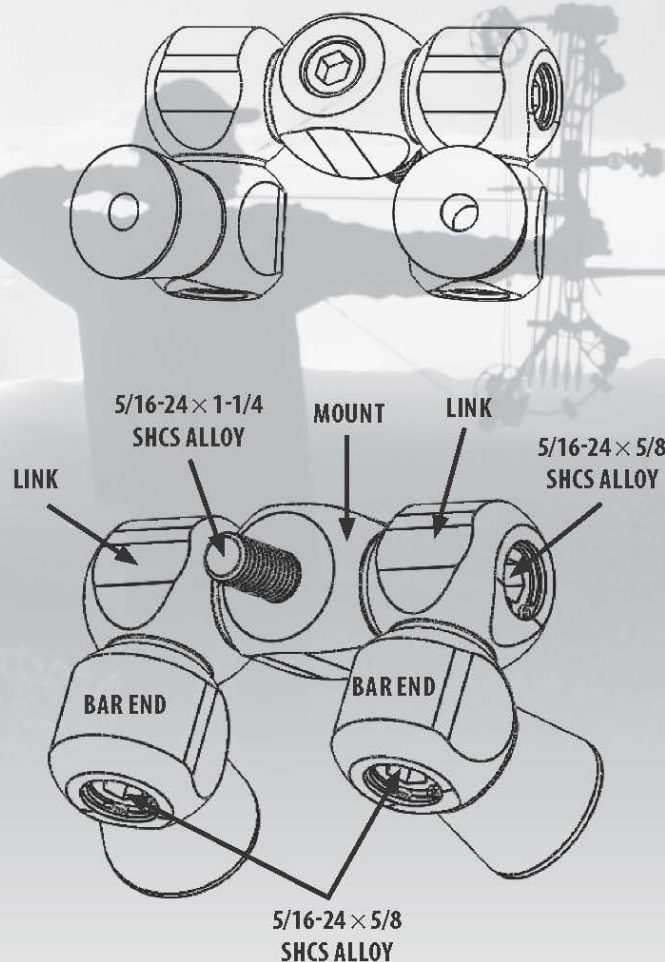

The newly designed **gripper V-Bar** by AAE adds to the already proven design of the original gripper. The tapered engagement offers maximum surface area contact for the ultimate in security while using 7075 aluminum to provide the most rigid connection to the bow possible. AAE's new proprietary BLS (Bolt Lock System) automatically micro drives the parts out when the user loosens the bolt. The BLS prevents the unwanted seizing or binding common with anodizing allowing the user to quickly and easily make minute adjustments. Laser etched reference marks have been added to both axes to monitor the finest of movements. The recessed mounting hole makes for a clean, finished look when mounted.

To mount the gripper by AAE, use the included mounting bolt. Slide bolt into the recessed hole on the back side of the "Mount" of the bracket. Mount bracket as level as possible as non-level mounting will result in a curved motion when adjusting each axis. Once securely mounted, adjust the up/down and in/out to the desired position.

Thank you for purchasing the new **gripper V-Bar** by AAE.
