

CAVALIER SUPER FLYTE

Patent No. 4133334

Instructions: This arrow rest combines the best of three worlds, Simplicity, Durability and Accuracy. Designed with the modern compound bow in mind, this rest solves a multitude of tuning problems.

This rest can be used with the stainless steel side pressure plate or with our "Master Lok Plunger", designed specifically for this type of rest. Either method will provide you with easy tuning and increased accuracy.

To use this rest, attach the side plate to your bow at right angles to your bowstring and tighten the 5/16-24 BHCS or plunger hex nut to hold the rest securely. The use of a bow square can aid in correct placement. Next, adjust your center shot as desired, by moving the hex rod in or out. Make sure the 6-32 x 5/16 SHCS is tight when you reach your desired center shot. Set your nocking point and begin your tuning. If you are a release shooter, you may find that rotating your nocks slightly can increase your vane clearance.

Since each archer may require a slightly different setup, please don't hesitate to experiment.

The side pressure plate is adjustable in or out to allow for arrow shaft size and can also be bent to fit any style of shooting. If the pressure plate is removed, the rest can be used with a cushion plunger.

To remove the arrow support arm, simply lift up on the outside back portion of the wire until it clears the hole and the inside leg will drop out of its hole. To replace the arrow support arm, be sure that the inside leg is bent up slightly higher than the outside wire. Place the inside leg in the front hole and gently lift the outside wire up into the back hole.

The Arrow Cage is a safety feature for the beginning or youth finger shooters, allowing the arrow to stay contained if it happens to fall off the support arm during the draw or shot. The Arrow Cage can be adjusted or removed by loosening the 8-32 x 1/4 SSCP.
